Tablet Dissolution Test Apparatus Model 912 is an instrument for the determination of active drug ingredient in any pharmaceutical formulation - tablet or capsule as per USP, BP and IP specifications. This apparatus evaluates adequate bio-availability and provides necessary information to formulate in the development of therapeutically optimum dosage forms. This dissolution testing device plays an important role in product development, quality control and research.

Single Test Dissolution Apparatus consists of constant temperature, acrylic water-bath in which dissolution vessel is placed. Dissolution medium specific for the tablet/capsule formulation is added into this dissolution vessel. Tablets or Capsules are introduced in the vessel. The stirrer speed is accurately controlled and maintained at ± 1 RPM by microprocessor based speed controller and the temperature of the water-bath is accurately maintained at ± 1 °C by a very sensitive thermostat.

The micro controller, elegant design and advanced features make this instrument state-of-the-art Dissolution Testing Apparatus. The analysis is performed as directed in the individual monograph.
